

itself. Obviously 325 is the first of a package of about...a total of, I believe, 25 bills in total, and a portion of those appear that on the agenda today make up the entire recommendation of the Appropriations Committee. The first thing I'd like to talk about, in general, I have passed out to the members on the floor a green sheet. After today this green sheet will become part of the daily agenda, between now and the end of the session. Members who attended our question and answer session, last week, had some questions about how do we keep track of things. If you look at this green sheet, is what I'm going to refer to it as, and it's truly green today, so it makes it easy, but it will be green from here on out as well. If you look at the front page, it's the part of the page which my initials are on. There's basically three components to that front page. The first is just the overall status, and that overall status reflects the committee's decisions, to date, to the total appropriations of \$1.6 billion and the portions of that. One thing you'll notice there, LB 491, the motor vehicle fee bill, that, by a decision by the committee, has been included in our package. And so if you look at that appropriations sections of the General Fund financial status, actually all those positive numbers there are monies that we expend, or we recommend to be expended. And 491, the negative number in that section, is actually revenue that is freed up because once you...if you generate the cash funds to cash fund the Department of Motor Vehicles, that amount of money is freed up. And so that's actually revenue, that shows in the negative. The only reason I point that out, it's exactly opposite of that from here on out, because then you look at impact of bills, a second section of that, you'll see that the committee recommendation is \$1 million, and there the bills enacted into law, you can see 7 to \$8,000 already. Now, wherein above the line that would have been a positive number, from this point on anything that spends money, spends money, it's bracketed on your financial status. And so that \$1 million, you can see if you already spent \$78,000 for the couple bills you already passed that cost money, there's still \$921,000 available for A bills if you adhere to the committee recommendation. After that you can see the total number of bills, there's \$1.3 million worth of bills, those are bills that cost money on Final Reading, there's \$782,000 worth of bills that cost money on Select File. And actually, E & R Initial, there's actually that \$950,000 is a positive number, whereas that's money to the good, the whole financial status. And you can see in the second year of the biennium there it's 8.25 million, and that is...the major
